Vragen 7	Vragen 5	Vragen 2	Vragen 0

Totaalgemiddelde per vraag

Hieronder staan de totale gemiddelden per vraag van deze evaluatie.

The learning objectives (what you should know and be able to do by the end) of the course were clear to me.	Neutral
Disagree to agree n 24 1.3σ	
The coherence between the different components of the course is	Neutral
Very little to very much n 24 1.2σ	
The organisation (e.g. the planning, scheduling, method of information provision) of the course was good.	Neutral
Disagree to agree n 24 1.2σ	
The information provided before and during the course was sufficient.	Neutral
Disagree to agree n 24 1.2σ	
The time that I spent on this course corresponded with the number of course credits.	Average
Less to more n 24 1.6σ	
My general opinion of the course is	Neutral
Bad to good n 24 1.3σ	
My general opinion of the lecturer(s) is	Neutral
Bad to good n 48 1.1σ	
The lecturer had a good command of English.	Neutral
Disagree to agree n 48 0.8σ	

Open vragen

Hieronder staan de resultaten per open vraag van deze evaluatie.

Do you have positive observations about this course?

n 24

1. Interdisciplinary, general, interactive
2. Be very clear when the auditions for the final dragons den are held! This was not clear to me, despite asking it...
3. If you are interested in start ups, the course can be quite interesting for you.
4. It provides lots of information for those who would like to start their own company some time in the future.
5. Learning about startups, pitching, obligatory lectures
6. Interesting topics
- 7.
8. It gives you an idea about how to handle certain aspects of starting a business on your own. The guest lectures were very nice and diverse.
- 9.
10. leaning poits, i believe the course teaches about an important subject and i learned many new things
11. Getting information from people who had experience in finding jobs, asking for patents etc
12. It was only half a semester long
13. In a relaxed setting learning things about other studies/business life
14. Learn about working in the field of AI by being introduced to different companies that apply AI in The Netherlands
15. You get to see real world applications of AI and learn from industry experts.
- 16.
17. Some of the guest speakers (not all) had a very good story to tell, it is nice that the subjects of the speakers vary greatly but still all have a connection with AI
18. External speakers and relation with the business world
19. Very interesting course. It also gives you the chance to work out and do something with your ideas, if you want.
- 20.
21. That the information it gave, van be usefull for the future. And especially how you van accomplish this.
22. The guest speakers
- 23.

If you have identified any points for improving this course, what would be your suggestions?

n 24

1. Content. The course focuses almost exclusively on entrepreneurship and stuff like that.
- 2.
3. The course is not taken seriously, people show up, sign their name, and leave again (even if the lecture is not over yet). Make some assignments students need to do at home so they are actually doing SOMETHING to pass this course.
4. It would be nice to provide some information for those who would rather apply for a job at a company, like how to write application letters or how to create a good CV.
5. Make everyone pitch. Also spend time on other professional skills like CV writing or interviews for people (like me) that are not interested in starting your own company
- 6.
7. The planning. They should make a course outline at the start and keep on schedule.
8. Not everyone is involved enough in the course. I've heard a lot of "I don't know" and "I don't have a good idea" when you needed to present pitches in the little groups. People took an easy way out of pitching by saying this. This bothered me because I and some other people did put the effort in. So for once, you could ask everyone to submit an idea on blackboard and select the best ideas for the pitching round from there.
9. Perhaps more room to professional skills in the sense of "getting your dream job/interviews etc" instead of just focusing on "startups"
10. maybe do a bit more with the book? (because i like the book and im not sure everyone tried it)
11. Now people could pass the course without doing anything. It would be better if for example everybody had to upload their pitch or to have some exercises
12. This course was not very useful, there was very little incentive to pay attention. Also there was very little incentive to actively process the information you got. It was mostly just receiving input and not really do anything with it, there should be more incentive to actually process the information you received.
13. I would say that this is not a bachelor course but a master course. Also i would ask for little Assignments after every guest speaker.
14. Less info on starting a company more on working in the field of AI
15. Maybe have everybody do a pitch, as it was easy to simply pass the course by just being present and not contributing in any way.
16. - General course organization & structure (make lectures more coherent, have a clear purpose for the practicals and make them longer. Make sure that students really feel like they are participating in a serious course, instead of just going to a lecture once a week and write down their name to get EC) - English level of lecturers (Dorien's in particular, some guest speakers were quite awful as well) - Involvement of students; although all students were encouraged to participate, in practice they did not, partially because there wasn't time nor space to do so.
17. I would have liked to learn more relevant stuff for a third year AI bachelor student. Sure it is

interesting to learn the ins and outs of patents, startups and innovation, but almost all students will not end up doing anything with this. Besides if I had plans on creating a startup or launching my own product, I would not do this before I finished studying. I would have personally preferred more focus on speaking in front of groups, but especially a big focus on applying on jobs, creating a professional cv (in e.g. LaTeX), or information about what to do after graduation (perhaps have some AI students who just started working talk, since they might be in a position we can be in very soon). Finally I really don't like obligation to attend to the lectures. It gave the feeling that everyone attending the lectures was simply there to scrawl their signature on the piece of paper going through the room, and frequently people would leave in the break when they wrote their name on the presence list. I'd rather have the lectures being free to visit and having a small group of students being there that are actually interested as opposed to a filled room where everyone wants to leave.

18. Build up towards final dragon's den.

19.

20. Less focus on starting your own business. Do not continue after the lesson ended (happened often).

21. Also some information for the students who do not want to begin a start-up company but Just want to workshop at a company.

22. More interaction and make sure everyone has to do a pitch

23. basically everything. cant really take the course seriously at its current state: its a total joke

24.

Other comments and/or explanations regarding the answers you gave to specific questions.

10.

11.

12. To be honest something should really happen to this course. There are possibilities here to prepare people for finding jobs etc. but instead it focuses on a small niche(people in startups) which I think is illogical. For me this was the most useless course in the entire study up until now and I can imagine it is not just me
